

CWA SHIP KARACHI 2026

Sponsor the builders who **ship** in public.

A one-day, onsite hackathon in Karachi for developers who want to build real products with AI, not just talk about it. Backed by the Code with Ahsan community across 170K+ followers on YouTube, Instagram, Facebook, LinkedIn, TikTok, X, and Threads.

WHY SPONSOR

You are not buying a logo slot. You are buying **first access**.

CWA Ship Karachi puts your brand in front of the exact developers you are trying to hire, sell to, or get onto your platform, before they finish the hackathon and go looking for a job or a product elsewhere.

170K+

Combined community across YouTube, Instagram, Facebook, LinkedIn, TikTok, X & Threads

150-300

Developers expected onsite in Karachi, from students to working engineers

2023

Track record: CWA's first hackathon ran in collaboration with GDG Kolachi

THE REALITY

Most hackathon sponsorships buy you a static logo nobody remembers. Here, your brand sits inside **content that keeps working after the event ends**: recap reels, LinkedIn posts, and a community that Ahsan talks to every week, not just on hackathon day.

01 What sponsors actually get

VISIBILITY	Brand placement across event materials, landing page, and multi-platform recap content reaching 170K+ followers
ACCESS	Direct room access to developers actively building, before recruiters on LinkedIn ever reach them
CREDIBILITY	Association with a community-trusted, technically credible host, not a generic events company
CONTENT	Your brand appears inside organic recap reels and posts the community already engages with

IN-KIND SPONSORSHIP

No cash tier? We can still make it work.

Food, swag, venue, prizes, or API and cloud credits all count. Logo placement is scaled to the estimated value of the contribution.

FOOD & VENUE

Catering, snacks, or hosting the venue itself. Treated as Gold-equivalent for a full-day event.

PRIZES & SWAG

Cash prizes, hardware, subscriptions, or branded merch for participants and winners.

TOOLS & CREDITS

API credits, cloud credits, or tool access developers can actually use to build during the event.
